

Software Development Intern

SCALABLE Network Technologies (SCALABLE) (scalable-networks.com), is a vibrant, entrepreneurial company that is the acknowledged leader in real-time emulation of next generation communication networks and its application to all stages of system life cycle – from analysis, design, development to test, deployment and training.

SCALABLE is looking for a motivated, creative, and enthusiastic student to join our team as a Software Development Intern at our Culver City, CA office.

Responsibilities and Learning Opportunities:

- You will be integrated into engineering teams and learn about how software is built, tested and deployed
- Software development includes front-end and back-end development
- You will become familiar with Agile methodologies
- Unit, functional and performance testing of back-end and front-end code

Desired Experience and Qualifications:

- Currently enrolled in the Bachelor/Master of Science program in Computer Science, Computer Engineering or a similar program
- U.S. residency or citizenship required
- Experience with C++ and Python
- Experience with Qt and Qwt
- Strong algorithm background, operating systems and general system design
- Strong work ethic, positive attitude, and adaptive to rapidly-changing environments
- Excellent listening skills
- Strong communication skills
